Sally,

I have the following minor comments/questions:

1. What is the definition of "smart city traffic signal"? I could not find a definition in the report. Currently, Forest Drives has an adaptive control software (ACS-Lite). Does the report refer to this type of technology? Or does the document refer to a more infrastructure to vehicle communication technology? The report should define what is the meaning of the "smart city traffic signal."
2. Please note that the County Executive has signed a Multimodal Transportation Bill (78-18). This bill was created to incorporate multi-modal evaluation during the subdivision review process.
3. The County is hiring a consultant to assist with the updating the County's design manual. The update will include new roadway cross-sections that will take into account the complete street approach. The update will also generate new guidelines for Traffic Impact Studies associated with development in the County.

By the way, would you like for me to be in attendance during the public hearing?

Thanks

Hello,

Just checking in to see if any of you had comments on the Forest Drive/Eastport Sector Study? We are going Thursday to Planning Commission for a public hearing. Thank you!

Hello everyone,

I'm sending along a link to our public review copy of the Forest Drive/Eastport Sector Study:

<https://www.annapolis.gov/DocumentCenter/View/10484/Forest-Drive-Eastport-Sector-Study-Draft-Plan-8-31-18>

I am planning to take this formally to our Planning Commission on Nov. 1. The implementation table in the study shows some high-priority actions we would like to take to implement this plan and many of them require working with our County and state partners. There are additional actions shown in Appendix E. In any case, I would appreciate any comment you may have by Nov. 1. Thank you so much,

Sally
